

Stanchion Lead Block & Cleat N03591 & N13591

The Barton stanchion lead block with cleat completes the range of stanchion lead blocks that have proved so popular with Cruising sailors all over the World.

Mounted onto the pushpit rail, the stanchion lead block with cleat enables cleating of the Genoa furler control line with one easy action, doing away with the need to cleat off on the deck or cockpit coaming.

Adjustment of the stainless steel securing ring enables fitment at the correct angle with additional adjustment of the cam cleat angle if required. The unit will fully rotate about the swivel head to match your pulling angle.

Available in plain bearing or ball bearing configuration, this block offers smooth running and a long service life. Fits 25mm diameter steel tubing.

Safe Working Load: 400kg
Maximum rolling load (ball bearing): 270kg
Line diameter max.:10mm (
Fits 25mm tube diameter
Weight: 187 grams
