

32mm Genoa Car Inserts for 6mm thick track

Barton Marine understands the problems that face boat owners and boat builders when it comes to changing T-Tracks on a boat.

Our standard genoa cars are designed to work with 32mm x 5mm T-track and we have a solution for 6mm tacks. However older boats are often fitted with 32mm x 6mm T-Track so cars are not readily available from other suppliers. Barton plastic inserts can be fitted to our standard genoa and main sheet cars by simply removing the standard 5mm inserts and replacing them with our 6mm converter inserts. This is a cost effective solution, that eliminates the need to change the track on your boat when new cars are required. Inserts are supplied as pairs (1 set per car is needed).

The inserts are made of a marine grade low friction nylon so the friction between the car and track is minimised.

32mm x 6mm 'T Tracks' were made by companies like Gibb Marine, Lewmar, Amiot, Pfeiffer, Antal, Sprenger to name a few.

32996M – Fits Barton car 32211	152mm (6") Length
32998M – Fits Barton cars 32101, 32201, 32210	128mm(5") Length
