

Barton 32mm (1 ¼") Towable Car for 50mm Webbing

As part of our commitment to industrial products and support we were asked for a slider designed to run on 32mm (1 1/4") 'T' track that could be used with 50mm webbing.

The product shown is designed to be pulled in to place and held there with the control lines.

Featured Product No 99925

All are manufactured from high quality marine grade aluminium and finished with our unique 'Spectro' grey anodised finish for added protection. The cars feature moulded nylon inserts to ensure free, smooth running under load and prevent damage to finish or potential corrosion.

This product can be supplied with a plunger, allowing the car to be locked in place instead of using the control lines to set the position.
