

Block On A Strop

This special Block was designed and developed for Marinas, Scaffolders, Builders and any industrial site or engineer who needs multiple lift options in a given worksite. Manufactured of black glass filled nylon and stainless steel, this durable No 7 precision Plain or Ball Bearing Sheave Block has a stainless steel becket at the base for leverage. The attached Dyneema spliced strop, can be attached to a belt or tool bag for easy hands-free carrying. Block on a Strop can be slipped around a pole, tube or bar anywhere to create a bespoke lifting device for equipment, panels or tools - and then removed or relocated when the job is complete. CE certified for quality and compliance

Barton Marine manufactures products for a wide range of industrial companies.

We can provide certificates of conformity for product or they can be independently tested and certified according to customers' needs.

Standard product can be printed with the customer's own Logo and can be modified as required. We can customize products and use our standard sheaves and extrusions as the basis for designs.

Working Load Limit: 600kg (1322lbs)
