

Size 2 Double Stanchion Lead Block N02290 – 2023 model

The Barton Size 2 double stanchion lead block is integral to the range of stanchion lead blocks that have proved so popular with Cruising Sailors all over the World.

Mounted onto the stanchion base, the revised block now features a removable clevis pin and ring which allows for continuous furler lines to be easily installed in situ by removal of the two sheaves. Once the line is in place the sheaves are re-inserted and secured with the pin and ring.

Adjustment of the stainless steel securing strap enables fitment at the correct angle. The unit will fully rotate about the swivel head to match your pulling angle.

Available in plain bearing or ball bearing configuration, this block offers smooth running and a long service life. Fits 25mm (1") diameter steel tubing.

Safe Working Load: 370kg (815lbs)
Maximum rolling load (ball bearing): 260kg (572lbs)
Line diameter max.: 8mm (0.3")
Weight: 108 grams (0.24lbs)
Length: 130mm (5.1")
Height: 40mm (1.6")
Width: 55mm (2.2")
