

Barton Rope Stoppers

Description

Rope Stoppers can also be referred to as parrel beads, tie balls, halyard stoppers, or stopper balls and are primarily used in rope management.

At the end of a line, Rope Stoppers serves as an easy-to-grab end knob, can be more reliable and effective than a stopper knot, and prevent the line from pulling all the way through the sheave, fairlead, ferrule, or cleat.

As part of overall rope management, Rope Stoppers serve to protect the eye splice and whipping twine used to terminate the line. Rope Stoppers will help the longevity and life of the line.

Manufactured from Polypropylene plastic for durability and UV stability.

Features –

- Perfect to put at the end of a piece of a line for increased grip.
- Prevents line from running through, jamming, or getting hung up on a variety of hardware.
- Helps in protecting all lines of all materials from damage.
- Color coded to help identify line usage.
