

Barton Snatch Blocks 90301, 90401 & 90402

Barton Snatch Blocks give the crew the option to locate the block anywhere on deck by means of the stainless steel snap shackle then locate a rope into the sheave without the need to reeve the line through. The side plate unclips to allow easy access.

Manufactured using 316 stainless steel they come with a snap shackle, snap hook and glass filled nylon side plates. You can also choose a stainless steel 'D' Shackle for ultimate strength.

These are used to divert sheet lines already in use, typically the Spinnaker or Genoa where a change of sheeting angle is required.

#90301 Small Snatch Block suitable for yachts up to 9m (30ft)

#90401 & 90402 Large Snatch Block suitable for yachts up to 12.2m (40ft)

Important note - Snatch Blocks:

When using Snatch Blocks on a toe rail, a bungee line should be attached to the becket to prevent the block 'tumbling' and causing damage by snagging.
