

Barton Snubbing Winch

21101

The Barton snubbing winch is cost effective, light weight, corrosion resistant and truly low maintenance.

Features include 316 stainless steel ribs inset into a glass fibre reinforced nylon drum casing and a single internal spring loaded ratchet mechanism.

The unit is fitted by removing the top screw and lifting off the drum to reveal the four 5mm (3/16") fixing holes.

Ideal for use on dinghies and small dayboats where a simple winch action is required to hold jib sheets.
